Windows

Download and Installation Instructions Firmware Version 1.1.0 incorporates the following enhancement:
1. Enables NFC connection with smartphones running Android 10 operating system.
*For Android running v6.0 or later, use Camera Connect v2.7.10 or later.
*For Android running v5.0 or older, use a connection method other than NFC.
This firmware update is for cameras equipped with firmware up to Version 1.0.2. If the camera's firmware is already Version 1.1.0, this update is unnecessary.When updating the firmware of your camera, please first review the instructions thoroughly.

Preparations for a firmware update:
After the downloaded compressed file (.zip) is extracted, a firmware folder is created.
*Extracting the downloaded file:
Right-click the zip file, and then select Extract All to extract the file.
In the folder you downloaded are the firmware (CCF24110.FIR / file size: 29,434,704 bytes) and instructions on the firmware update procedures (a PDF file in five languages: Japanese, English, French, Spanish, and Simplified Chinese). Before starting the firmware update operations, please be sure to check the procedure in accordance with the instruction.
(The following is the history of past firmware updates.)
Q: Are the improvements from previous firmware versions included in Firmware Version 1.1.0?
A: Yes, the following improvements from the previous version are included:
Changes in version 1.0.2:
1. Corrects a PTP communications vulnerability.
2. Corrects a vulnerability related to firmware update.
